Local Place Board and complete paper route

The adjacent index.html, board.css and board.js run locally with no account, external service/API, upload, camera, microphone, analytics, persistent storage or external library/font. Local static hosting loads the page, its adjacent files and linked materials through ordinary browser requests. Direct-file use is an option where your browser permits; it has not been separately tested here. It starts empty. Work is tab memory only; closing/reloading loses it. There is no download, saving promise, automatic fact check, measured scale, generated fieldwork or reported learning score. Eight features is a tool capacity, not a learning quota.

Actual local device route

1. Adult opens the three adjacent files through local file hosting or the HTML file as their approved browser permits. Review source/privacy/access before use. Actual browser use is pending: the author browser connection was unavailable on 7 October 2026. Static and local JavaScript checks do not establish a successful browser trial or every browser/file configuration.

2. Choose source kind and optional actual source/viewpoint details. Kind is user-entered metadata, not verification. Do not enter personal names, home routes or sensitive layouts.

3. Enter a meaningful feature name, a source-supported aspect or unknown, and a board position. Add makes an actual labelled feature, with a complete current description. It does not select facts or create learner reasoning for you.

4. Choose Edit for an actual feature, change its name/aspect/position, then press Change selected feature. Keep copy preserves an actual current snapshot in this tab; edits/removal do not change that snapshot.

5. Choose a find/match task from a fixed view, self-try or ask a real willing helper if wanted. Enter only the actual result/unknown/not tried. The tool does not observe user understanding or decide a trial succeeded.

6. Keep/change/stop. Clear asks in-page first; Keep working cancels, Yes clears all current/kept/source/note work. No undo or durable storage. If wanted, keep an exact paper trace before closing.

Complete paper / drawing / child-directed route

1. Read a complete invented O1 or actually reviewed source. Choose a safe reachable sheet or exact described workspace. A large marked corner fixes the viewpoint; no compass claim unless sourced.

Keep the complete notice packet. Original expression CC BY 4.0; code/font/renderer terms separate.

2. Choose the guide job and relevant feature meanings. Use broad paper scraps/large tactile objects, marks/drawing or usual speech/sign/gesture/AAC/exact description. A wanted adult can move/write exactly as directed, with their contribution named.

3. Actually arrange/create the guide, add meaning key/source line or their agreed exact spoken/signed equivalent. A specification not made remains a plan. A source picture is stimulus, not your actual product.

4. Keep a real trace if comparison is wanted: a second drawing/arrangement or exact recorded description before changing anything. Do not invent a missing earlier version.

5. Try a chosen find/match task alone or with a real willing helper; record actual conditions/result/reply or NONE. A puppet or predicted success is rehearsal. Private, pause and not tried are valid.

6. Make a wanted permitted model revision and compare it with source/actual task. Real school/public-place changes need responsible adults; a paper care proposal is not adoption. Keep one useful bit or finish.

Both routes preserve child meaning and source limits. Usual access support is not lower-status work; device independence, handwriting, number of features and speaking volume are not HASS criteria. No actual human/classroom outcome is supplied by this source.
