Fresh E · predict, then reveal

Year 2 Science · choose your question and how to show your finding

Stage 1: before and planned action

Known cotton cloth lies flat on a table. Its recorded left-to-right span is 4 equal paper units. A fictional adult plans to gather it loosely into a mound. No outcome is disclosed yet. This is an invented source, not a real observation. Predict and keep your reason BEFORE the lower outcome part is uncovered.

A: before · 4 equal units

Prediction / source of idea / support

Staff: cover the entire lower panel before showing this sheet, or use the separate literal Stage 1 first.

Stage 2: reveal only after capture

The fictional adult gathers the same known cotton cloth loosely into a mound. Its recorded left-to-right span is 2 equal paper units. Then the adult releases it and actively arranges it flat on the table; the recorded span is 4 units. These are invented illustration/record values, not required real results. The adult’s arranging is an action; release alone is not shown to return it flat.

B: gathered · 2 equal units

C: adult arranged flat · 4 equal units

After source release

Name material/action/form/source. Compare the kept prediction. Ask a safe further question. No worked answer here.
