MODEL · a clue for an estimate

MODEL · estimate first, then check

A known group has 20 pieces. Four such groups and a smaller loose group suggest 80–100. On checking:86 pieces. The estimate is not the exact count.

20 pieces **20 pieces** **20 pieces** **20 pieces**

4 × 20 + 6 = 86 pieces

About 90 may help plan space. Exact 86 is the supplied checked count. Make your own estimate on a new collection before counting; do not copy this model into your own response.
