Mass · m-first

Show one idea at a time.

MODEL scale labels 0,100,200,300,400,500 g, with a middle mark in each gap. Pointer is at 250 g. Empty pouch is 80 g and pouch plus pieces is 260 g. Another sealed model package is 210 g. No body weighing or actual local product is involved.

Usual communication, exact scribing, private/untimed response, rest or pause are welcome. An adult may read/describe all source facts neutrally, without choosing your maths or giving answers. These supplied models do not establish real measuring.

1. Choose a unit and tool for the mass of a small safe package. Explain why.

Own response: [empty before your attempt]

2. How big is each marked gap, and what is the pointer reading?

Own response: [empty before your attempt]

3. Find the mass of the pieces without the pouch. Show a connected check.

Own response: [empty before your attempt]

4. Which is heavier: the pointer-reading package or the other package? By how much?

Own response: [empty before your attempt]
