YOUR RESPONSE · words, drawing, signing or wanted help

ORIGINAL FICTIONAL SOURCE: Question: How many features does each of these fictional paper bundles have? Unit is one paper bundle; variable is its whole-number paper-piece count. Available per-item values in order: 0, 2, 2, 3, 3, 3. There are 1 additional items whose values are unavailable. A listed 0 is an observed empty count in this model, not unavailable. No real object observation occurred.

1. Name the data unit and variable; explain why its values are discrete numerical counts.

2. Make or describe a frequency table of every available value, keeping unavailable separate.

3. Explain the row for value 2, and say what 0 means here.

4. Give known-item and all-item totals; explain one limit and a check using the original records.
